(54) Title: PROVIDING LOCATION INFORMATION OF A USER EQUIPMENT

(57) Abstract: There is disclosed a method in a communication system for providing a location service with geographical location information associated with a user equipment capable of communicating with the communication system, the method comprising the steps of: storing connection information identifying a connection of the user equipment in the communication system; and determining whether the user equipment is currently connected in the network, wherein responsive to the user equipment not currently being connected in the network, the location of the user equipment is determined in dependence on the last stored connection information for the user equipment, the method further including the step of translating the connection information into geographical coordinates.
